

Prompt Evaluation

Question 1

You wrote a prompt and tested it once. It worked fine, so you deployed it to production. What's the main risk with this approach?

- ☒ Users will provide unexpected inputs that break it
- ☐ The prompt will become too expensive
- ☐ The prompt will work too slowly
- ☐ Other developers won't understand it

Question 2

You need test cases for your prompt evaluation. You have two options: write them by hand or use Claude to generate them. Which model should you use for generation?

- ☐ The most expensive model available
- ☐ Multiple models combined
- ☒ A faster model like Haiku
- ☐ The same model you're testing

Question 3

You're running a prompt evaluation workflow. You've used Claude to generate some responses. What's the next step?

- ☐ Deploy to production
- ☐ Rewrite the original prompt
- ☐ Create more test questions
- ☒ Feed the responses through a grader

Question 4

You want to measure how well your prompts actually work in practice. Which approach should you focus on?

- ☐ Using more examples
- ☐ Prompt engineering techniques
- ☐ Writing longer prompts
- ☒ Prompt evaluation methods

Question 5

You're using a model grader to evaluate responses. To get better scores than just middle-range numbers, what should you ask for alongside the score?

- ☐ Just the numerical score

- ☐ Comparison to other responses
- ☒ Strengths, weaknesses, and reasoning
- ☐ A longer explanation

Question 6

Which type of grader uses another AI model to assess the quality of outputs?

- ☒ Model grader
- ☐ Human grader
- ☐ Syntax grader
- ☐ Code grader
