

Introduction to AI Fluency

Welcome! This part of the course introduces you to this course's focus: developing meaningful collaboration with AI rather than just learning about AI technology. We explain that this course explores how to build a lasting framework for working with AI systems that goes beyond simple and temporary tips and tricks. We explain what we mean by AI Fluency: it is the ability to collaborate with AI in ways that are effective, efficient, ethical, and safe. We also outline the course structure, which covers each of the AI Fluency core competencies (the 4Ds) as well as key technical and practical concepts. By the end of the course, you'll have a framework for thoughtful AI interaction, confidence in choosing when and how to work with AI effectively, practical collaboration skills, and the ability to evaluate and disseminate AI-assisted work responsibly.

Video Link: [Introduction to AI Fluency](#)

Estimated time for this module: 10-15 minutes

By the end of this lesson, you will be able to:

- Understand the purpose and structure of the course
- Recognize the importance of AI Fluency in today's world
- Identify key components of your learning journey ahead
- Set clear expectations for what you'll gain from this course

Exercises

Putting things into practice

You'll need access to a language model (5-10 mins)

Throughout this course, you'll practice what you're learning by working directly with a language model. While our examples feature Claude (Anthropic's AI assistant), you're welcome to work with any language model you prefer. The principles and skills we'll explore apply across different AI systems.

Getting started is simple and free:

- Claude: Visit claude.ai to create a free account
- No paid subscriptions required to complete course activities
- You can also use other AI chatbots as you prefer

New to Claude? No worries! We'll provide clear guidance with each exercise to help you get started.

Reflection

Before moving on, take a moment to consider your own experiences with AI:

- What challenges have you encountered when working with AI to achieve specific outcomes?

I find it difficult to work with AI when it is very difficult for me to put the problem in the form of words or natural language.

- What possibilities for AI collaboration excite you most?

The possibilities of AI collaboration excite me because it can help me to automate repetitive tasks, augment my creativity, enhance my productivity and basically becomes a source of passive income.

- What do you hope to gain from this course?

I hope to gain knowledge and prompting skills that can help me not only use AI but work alongside it to achieve my goals and desired outcomes while facing less issues and challenges as much as possible

What's next

In the next lesson, we'll explore why AI Fluency matters in today's rapidly evolving technological landscape. We'll introduce three key ways people collaborate with AI (Automation, Augmentation, and Agency) and the core competencies of the AI Fluency Framework: the "4Ds" of Delegation, Description, Discernment, and Diligence.

In the next lesson, we'll explore why AI Fluency matters in today's rapidly evolving technological landscape. We'll introduce three key ways people collaborate with AI (Automation, Augmentation, and Agency) and the core competencies of the AI Fluency Framework: the "4Ds" of Delegation, Description, Discernment, and Diligence.
