

Conclusion & Certificate

By the end of this lesson, you will be able to:

- Consolidate key learnings from the course
- Connect AI Fluency to your continuing development

Video: Conclusion

Video Link: [Conclusion](#)

This concluding video revisits the AI Fluency Framework and brings together the key concepts explored throughout the course. We recap the four core competencies (the 4Ds): Delegation (deciding what work to do with AI versus independently), Description (communicating effectively with AI), Discernment (evaluating AI outputs and behaviors), and Diligence (ensuring responsible AI collaboration). We emphasize that these competencies apply across all three major ways of interacting with AI (Automation, Augmentation, and Agency) and that fluency develops through practice, not overnight mastery. We close with a reminder that AI systems are powerful but not magical solutions; they're only as useful and safe as we enable them to be through our thoughtful engagement.

Key Takeaways

- AI Fluency develops through intentional practice of the four core competencies
- Delegation emphasizes that our expertise and judgment remain the foundation of effective AI collaboration
- Description involves clear communication that bridges our intentions and AI capabilities
- Discernment requires thoughtful and critical evaluation of outputs to work within the systems constraints
- Diligence ensures accountability, transparency, and responsibility in our AI work
- The most powerful outcomes emerge when humans and AI build on each other's strengths
- The framework is designed to remain relevant as AI systems continue to evolve

Exercises

Exercise: Discuss the AI Fluency Course with Claude

Engage Claude in a meaningful conversation about this course and the AI Fluency Framework (upload a copy of the framework from [here](#)).

Suggested conversation starters:

- "I've just completed a course on AI Fluency covering Delegation, Description, Discernment, and Diligence. Let's discuss how these competencies might apply to [my degree program or my job or whatever]."
- "Let's explore how the AI Fluency Framework might evolve as AI capabilities advance. What new competencies might become important in the future?" (If you do this one, reach out and let us know what you discover!)

- "Help me identify which of the 4D competencies I seem to understand well and which I might need to develop further, based on our conversation."
- "Here's [some exercise you did in this course]. Let's analyze it to improve my competencies."

Exercise: Build a Personal AI Policy

With the help of Claude, create your own guidelines for responsible and ethical AI collaboration in your personal and professional contexts:

- Create clear standards for when and how you'll work with AI in different contexts
- Establish boundaries for sensitive or confidential information
- Define how you'll maintain quality control for AI-assisted work
- Identify ethical issues most relevant to your field or activities
- Develop decision-making criteria for addressing ethical dilemmas
- Consider the perspectives of different people who might be affected by your AI interactions
- Determine how you'll disclose AI collaboration in different contexts
- Create templates for attribution and transparency statements
- Establish criteria for when more detailed disclosure is appropriate

Work with Claude as a thinking partner in this process to explore ethical considerations from multiple perspectives.

Reflection

The exercises above serve as the reflection component for this lesson. Through them, you'll have the opportunity to consolidate your learning and connect it to your ongoing development.

What' next

Congratulations on completing the AI Fluency: Framework and Foundations course! This is just the beginning of your AI Fluency journey. As AI technologies continue to evolve, the competencies you've developed in Delegation, Description, Discernment, and Diligence, will provide a lasting framework to guide your work with these systems.

Remember that fluency develops through practice. Each interaction with AI is an opportunity to refine your skills and deepen your understanding. By approaching AI as a thinking partner rather than just a tool, and by maintaining a commitment to effectiveness, efficiency, ethics, and safety, you're well-positioned to navigate the future of human-AI collaboration.

We encourage you to continue exploring, experimenting, and reflecting on your AI interactions. There are many good additional exercises in Lesson 12 to continue your journey.

We encourage you to share what you've learned with others (and us!), seek out diverse perspectives, and contribute to the ongoing conversation about how we can work with AI in ways that amplify human potential while respecting our values and responsibilities to each other. Thank you for your participation and engagement throughout this course!

Additional Activities

The following activities are designed for self-directed learning after completing the AI Fluency: Framework and Foundations course.

Choose the ones that resonate with your interests and needs—or use them as inspiration to create your own!

Build a personal AI fluency plan

With the help of an AI assistant, create a structured plan for developing your AI fluency over time:

1. Current Competency Assessment

- For each of the 4D competencies, rate your current level of proficiency (novice, developing, confident)
- Document specific strengths and areas for growth within each competency
- Identify which ways of AI interacting (Automation, Augmentation, Agency) you currently use most and least effectively

2. Development Priority Identification

- Select 1-2 competencies to focus on developing first
- Identify specific aspects of these competencies that would be most valuable in your context
- Consider which ways of AI interaction you want to become more proficient with

3. Specific Action Planning

- Create specific activities to develop each priority competency
- Establish a timeline and frequency for practice sessions
- Identify resources and tools to support your development
- Define how you'll recognize progress and success

Work with Claude as a thinking partner in this process, sharing your self-assessments and getting feedback on your plan.

Build a personal prompt & pattern library

Create a personalized collection of effective prompts and patterns for your recurring AI interactions with the help of Claude:

1. Common Task Template Creation

- Identify 5-10 tasks you regularly perform with AI
- For each task, develop a template prompt that consistently produces good results
- Include placeholders or notes for variable information you'll need to add each time

2. Effective Strategy Documentation

- Document specific Description techniques that work well for different types of tasks
- Record Discernment patterns that help you evaluate outputs more effectively
- Note which approaches work best for different interaction modes

3. Personal Reference Resource Building

- Organize your templates and strategies in a way that's easy to search and access
- Include examples of successful outputs for reference
- Create a system for updating your library as you discover new effective approaches

You can work with Claude to analyze your past successful interactions and identify patterns that made them effective.

Game night!

These playful exercises for both you and Claude help you practice precise Description and sharpen your Discernment skills through word puzzles. Since puzzles have specific instructions (unlike open-ended tasks like "draft a thank-you note"), they're excellent for practicing clear communication. And because they're deliberately tricky, they provide great Discernment workouts! You can learn a lot about careful evaluation guidance of AI thinking processes by just playing a few games. Try any or all of the below.

Swap Riddles

Create a riddle (or try this one: "Five-score and more drums I tap to paint a symphony of light. What am I doing?").

(Answer: I am typing on a computer keyboard (usually 104 keys) to create pixels on a monitor.)

Have Claude guess, and, importantly, explain its reasoning.

Take note of not just what Claude guesses, but why.

Then don't give it the answer, but rather gently nudge Claude towards the right chain-of-thought and context to get to the answer.

Then switch sides and ask for a riddle in return. Have Claude guide you as you did it.

Co-operative crosswords

Work on crossword clues together (cryptic crossword clues can be especially interesting).

The focus is not about how good you or Claude are at doing the crossword. It's about learning to guide and refine thinking: "Remember, it's only 5 letters" "No can't be that because it starts with B" "Maybe they didn't mean "swallow" like drink, maybe they mean "swallow" like the bird."

These steering skills will prove surprisingly useful in a "real" project.

Word association

Word association games are very satisfying and informative to play with Claude (or a model of your choice). There are many games freely available online, just have a search!

Even just picking 12 - 20 random words and collaborating with Claude to find relationships between them can be great Discernment practice. When you notice Claude making questionable connections or overlooking promising patterns, point this out and guide it toward better reasoning. Similarly, be open to Claude spotting connections you might miss!

As you collaborate, practice all three types of Discernment:

- **Product Discernment:** Do the answers make logical sense and truly fit a cohesive theme?
- **Process Discernment:** How does Claude approach solving the puzzle? Does it consider multiple possibilities? Does it focus too narrowly on one interpretation?
- **Performance Discernment:** How does Claude communicate its thinking? Is it clear? Does it ask good questions? Does it build on your suggestions effectively?

More game suggestions

Continue developing your Description and Discernment skills through these activities:

- **Twenty Questions:** Have Claude think of an object, person, or concept, then try to guess it by asking yes/no questions. Then switch roles. Notice how you each formulate questions and provide clues.
- **Collaborative Storytelling:** Start a story with one sentence, have Claude continue with another, and alternate back and forth. Observe how you both maintain narrative coherence and build on each other's ideas.
- **A Wizard Approaches You in the Tavern:** If you enjoy playing role playing games, try playing a game or two with a language model as either player or game master.
- **Concepts & Constraints:** Choose a complex concept and really tight constraints like “explain using cooking metaphors only.” Then ask Claude to give you a challenge, try it yourself, and compare approaches.
- **Advanced Puzzling:** Create your own logic or word puzzles, then challenge Claude to solve it. Alternatively, ask Claude to create puzzles for you to solve. (If you are a programmer, you can swap out the puzzles and instead tackle thorny problems like [Project Euler](#) with Claude).
